TUNA BOSTANCIBAŞI

Mobile & Backend Product Engineer

538-722-72-58

tunabstncx@gmail.com

Konya,Türkiye

SUMMARY

AI-augmented mobile and backend developer specializing in React Native (Expo) and Node.js ecosystems. Experienced in building and shipping production-ready applications using modern AI-assisted workflows (Cursor, Claude Code) to accelerate development, refactoring, and architecture design. Focused on rapid iteration, scalable API design, and product-driven engineering.

EDUCATION

Pamukkale University / Denizli
(2020-2025)

PROFESSIONAL EXPERIENCE

**Füzyonist — Mobile/Backend Developer
2025 – Present | Konya**

A social evaluation platform where users review and rate products based on real experiences.

– Developed mobile application using React Native

– Designed backend services with Node.js for review, rating, and user interaction systems

**KodPit Software — Mobile Developer Intern
Denizli | 2023**

– Received foundational training in React Native development

– Built basic cross-platform components and API-connected features

– Learned Git-based collaborative workflows

**Phinia Delphi Technology — Mobile Developer Intern
2024 | İzmir**

– Contributed to React Native mobile application development

– Assisted API integrations and debugging processes

– Supported UI refinement and performance optimization

PROJECTS

**SorsanaApp — AI-Integrated Peer Learning App
Product Owner & Full-Stack Developer**

A peer-based question solving platform where students share questions and receive AI-supported explanations.
– Developed cross-platform mobile app using React Native
– Built Node.js backend for question flow, user interaction, and content management
– Integrated AI-powered solution support for enhanced learning experience

**Apartment Management System —
Undergraduate Thesis Project**

Digitized apartment management processes including payments, announcements, and tenant communication.
– React Native (Expo) mobile client
– .NET Core REST API backend
– MS SQL Server database design and management
– Role-based access and financial record tracking

TECHNICAL SKILLS

AI-Assisted Development: Cursor IDE, Claude Code, prompt-driven architecture refinement
Mobile: React Native, Expo (EAS Build, OTA updates)
Backend: Node.js, Express.js .NET
Frontend: React.js, Next.js
Database: MS SQL Server, Firebase, Supabase
Tools: Git, GitHub, Postman, Figma, Vercel, Netlify
